# ECONOMIC INTELLIGENCE STATISTICAL HANDBOOK

CIA/RR RA-12-R1 (ORR Project 00.1758)

#### NOTICE

This compilation was prepared primarily for use in ORR and is not a formal ORR publication. Data for the Sino-Soviet Bloc are the best estimates of ORR as of 1 July 1957.

CENTRAL INTELLIGENCE AGENCY
Office of Research and Reports

#### **FOREWORD**

#### 1. Objectives and Scope.

The Economic Intelligence Statistical Handbook, 1957 (hereafter referred to as the 1957 Handbook), is a concise reference work in tabular and graphic form designed to supply data, primarily on production and inventories, which are pertinent to the analysis and comparison of the economic characteristics of the Sino-Soviet Bloc countries and the countries comprising the North Atlantic Treaty Organization (NATO).

Countries of the Sino-Soviet Bloc included in the 1957 Handbook are the USSR, Communist China, North Korea, North Vietnam, and the European Satellites (Albania, Bulgaria, Czechoslovakia, East Germany, Hungary, Poland, and Rumania). The total production of these countries is compared with that of NATO, whose member countries are Belgium, Canada, Denmark, France, Greece, Iceland, Italy, Luxembourg, the Netherlands, Norway, Portugal, Turkey, the UK, the US, and West Germany. The Saar has been added as a separate political entity because its industrial production is often listed separately in the sources used.

The 1957 Handbook covers primarily the years 1938, 1950, and 1954-56. The previous handbook, which was published in February 1957, covered the years 1938 and 1946-55 and included 1956 estimates for the Sino-Soviet Bloc. The 1957 Handbook is a revision of the preliminary data published earlier and contains data which are believed to be more firm. A more complete series-1938, 1946, 1948, and 1950-56-has been included in this edition for the commodities considered most important as a measure of economic development. Graphic presentation of the data for these commodities has also been included. Data for individual NATO countries, except for the US, have been included only for the years 1954-55 or 1955-56. When available, data for other major producers of the Free World have also been included for the same years. The US data are given for each year and are always included in the NATO total.

#### 2. Sources and Reliability.

Unless otherwise indicated by a source note, data for the Sino-Soviet Bloc countries are ORR estimates contained in the ORR Central Estimates File as of 1 July 1957. To provide a central source for up-to-date reference data, ORR analysts contribute to this file all economic estimates as they are made and revise them regularly. Some of these estimates are provisional. The wealth of statistical data contained in economic handbooks issued by various Sino-Soviet Bloc countries during the past year has increased the general reliability of data contained in this publication compared with previous issues.

Data for the NATO countries were selected from the most reliable and most current sources available. In general, these sources are unclassified publications of the UN and of the Organization for European Economic Cooperation (OEEC) and official statistical publications of the various countries. Reasonable care was exercised in selecting the sources, but CIA does not assume responsibility for their accuracy. A list of the major sources used is included in this volume.

Blanks which appear in the data for any country listed indicate that information was not available as to either the amount or the existence of production. The omission of country names from the table likewise indicates that information was not available as to the amount or the existence of production. However, where it is known that there was no production in a Sino-Soviet Bloc country, this fact is stated in a footnote. Such a statement in regard to the NATO

SECRET iii

countries was not possible, because the sources did not usually distinguish between "No Production" and "Not Available."

#### 3. Boundaries.

Because the Sino-Soviet Bloc is relatively new and because significant boundary changes have occurred during the past 25 years, comparability of data becomes an important problem in analyzing some series. Unless otherwise indicated, boundaries of the countries in this research aid are those presently in force, and the data for earlier years have been adjusted accordingly.

#### 4. Time Series.

No attempt has been made in compiling the 1957 Handbook to adjust time series to take account of such problems as homogeneity of the product and consistency of reporting systems. Those inconsistencies which are known to be unadjusted have been indicated in footnotes to the individual tables.

#### 5. Rounding.

With the exception of a few tables, the data in this report have been rounded to three significant digits. The term "Negligible" has been used to indicate that some production is known to exist but that the amount is too small to be significant.

#### 6. Totals.

Totals for NATO and Sino-Soviet Bloc countries are simple additions of unrounded data. Hence they may not always agree with the sum of the rounded figures which appear under the individual country headings. No adjustment has been made to compensate for gaps in country data. Totals were omitted, however, when they were obviously far from the true total of production. Estimated world totals have been included only when the estimates were available in the source publications and when they did not conflict with the summation of the other data appearing in the table.

<sup>•</sup> GNP at factor costs equals GNP at market prices plus subsidies minus indirect taxes.

b The estimates shown for the European Satellites are only rough indicators of the relative size and rates of growth of the gross national products (GNP) of these countries. The annual rates of growth which may be calculated from these values are considered less reliable than the changes indicated for longer periods. Because of the limitations of the data from which these estimates are derived and because of possible differences in concept and methodology, these GNP values are not necessarily closely comparable with estimates for other countries.

<sup>&</sup>lt;sup>b</sup> Conversion to US dollars is not possible, because the ruble-dollar ratio for GNP was derived at market prices, not at factor cost. For US dollar valuation of GNP at market prices, see Table 1.

<sup>&</sup>lt;sup>a</sup> Official index for North Korea is on the basis of 1948 = 100.

<sup>&</sup>lt;sup>b</sup> Preliminary.

<sup>°</sup> Officially announced index with minor adjustments.

<sup>&</sup>lt;sup>d</sup> The indexes shown for the European Satellites are only rough indicators of the growth of industrial production in these countries, particularly in the case of annual changes. Despite their limitations, these indexes are believed to give a more accurate impression of the growth in net industrial production than do the official data concerning gross industrial production.

<sup>&</sup>lt;sup>e</sup> This index is not entirely comparable with the estimates of GNP that are given for Hungary in Table 1. The GNP values for the period 1950-56 are based in part on the official index of national income, which is considered the best available indicator of the trend in GNP. However, official data on net industrial production (which would be used in calculating the official index of national income) are not published by the Hungarian government. Considering the trend shown in the official index of national income, the figure for 1951 in the present rough index of industrial production appears to be too small and the figures for 1954-56 appear to be too large.

<sup>•</sup> An appropriate ruble-dollar ratio is not available to express the budget in terms of US dollars. It would be misleading to convert the rubles to dollars at the official exchange rate of 4 rubles to 1 US dollar. An idea of the importance of the budget in the national economy is seen by the fact that the 1955 expenditure of 539.5 billion rubles is about 42 percent of the GNP at market prices.

<sup>&</sup>lt;sup>b</sup> All figures in parentheses are estimates.

c In 1954-55 the Soviet budget included revenue and expenditure entries for retail price reductions (representing revenue foregone) and tax rebates to procurement organizations for paying higher agricultural procurement prices. After 1954, there were no more entries for retail price reductions, and tax rebates to procurement organizations were gradually abolished between 1954 and 1956. In 1955 the expenditure entry for rebates was transferred into Procurement, under Financing the national economy.

<sup>&</sup>lt;sup>d</sup> Actual expenditures for reserve funds are shown as zero because any reserve funds spent are listed under the category for which they are spent.

<sup>\*</sup> Because of the difficulty of determining a valid exchange rate, yuan have not been converted into dollars. The rate of 2.46 yuan to 1 US dollar usually quoted is based on the yuan-sterling rate for telegraphic transfers. This should be used with caution, as it is not applicable to the budget data. The budgets of 1956 and 1957 reflect the price cuts of 1956 and, if expressed in the old prices, would be about 3 percent higher.

<sup>&</sup>lt;sup>b</sup> Carried over from previous year.

<sup>°</sup> The budget speech gives this figure as the surplus funds accumulated since 1949. The Chinese Communists in calculating surplus funds exclude certain of the expenditures for 1951 and 1952 and add certain items to 1950 receipts. Because the 1955 budget speech states that roughly half of the surplus had been previously allocated, only ₹3,155 million is carried over into the 1955 budget.

 $<sup>^{\</sup>rm d}$  Including a grant to the banking system of \$600 million and a general reserve of \$594 million.

<sup>&</sup>lt;sup>a</sup> Data refer to the annual average of civilian workers 12 years of age and older in the Sino-Soviet Bloc, to the annual average of civilian workers 14 years of age and older in the US, and to the total labor force including armed forces in the other NATO countries. For details regarding the number of armed forces included, see the following footnote.

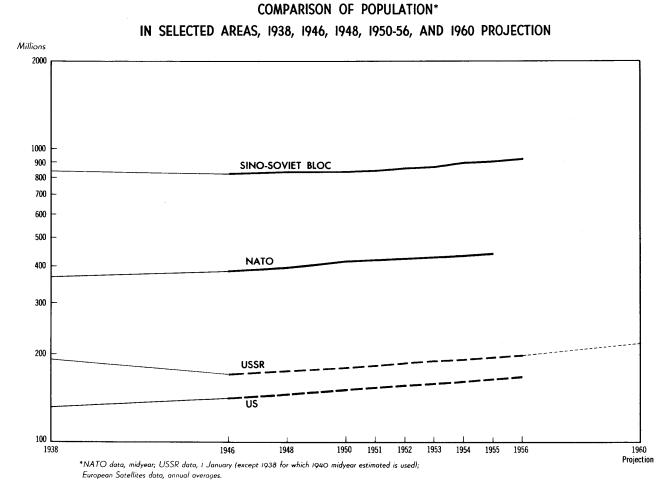

<sup>&</sup>lt;sup>b</sup> Excluding Denmark, Iceland, Portugal, and Turkey. For countries other than the US, armed forces are included. In 1954 the armed forces made up 2,805,800 of the total labor force of those countries; in 1955, 2,733,500.

<sup>&</sup>lt;sup>c</sup> Including unemployed.

d In terms of man-years.

Annual average of workers 12 years of age and older.

<sup>&</sup>lt;sup>b</sup> Including employed persons 14 years of age and older.

<sup>&</sup>lt;sup>c</sup> The decline in the annual average between 1952 and 1953 is artificially high because of the transfer of 1.3 million collective farmers to employment on machine tractor stations late in 1953. The number of farm workers employed at the end of 1952 was 46.1 million; at the end of 1953, 45.5 million.

<sup>&</sup>lt;sup>b</sup> Including only employed persons 14 years of age and older.

<sup>\*</sup> Including all NATO countries. The 1946 figure does not include Greece and West Germany. Data normally refer to net production (that is, total production less electricity consumed by the producing plants themselves) by both public utilities and auto-producers (private power stations producing power to supply a specific undertaking). The exceptions are Germany and the Netherlands in 1946-55, for which the data show gross production, and Canada, Denmark, and the UK, for which data cover only enterprises generating primarily for public use. Production by stations with installed capacity below a certain minimum, which varies by country, is also excluded.

<sup>&</sup>lt;sup>b</sup> All US public supply statistics are reported on a net basis. That is, the data represent power available at the bus bar and thus exclude station use and losses. They do include, however, transmission and distribution losses. When used to compare with Soviet Bloc data, about 5 percent should be added, because, as far as is known, Bloc production data are on a gross basis.

<sup>•</sup> Estimated.

<sup>•</sup> Excluding hard coal in Denmark, Greece, Iceland, and Luxembourg and brown coal in Belgium, Iceland, Luxembourg, Norway, and the UK.

10

b Million metric tons of standard fuel. The average calorific values used to convert to standard fuel of 7,000 kilocalories per kilogram are listed below. Calculations for standard fuel were not carried out for pre-1952 data, because to do so, using these same values, would be misleading. In most countries, there has been a deterioration in quality of coal since 1938 which has resulted in lower calorific values. As the trend has not been uniform, neither over time nor by individual country, it would be very difficult to arrive at the appropriate calorific values to be used for years prior to 1952.

d Converted to standard fuel on the basis of an estimated proration of the announced plan figure for total coal.

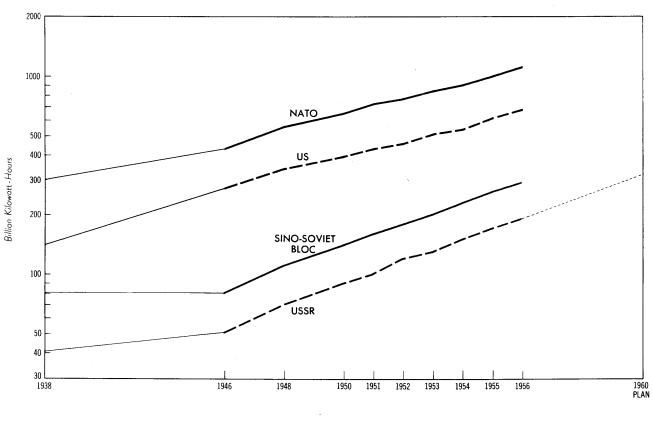

<sup>•</sup> Brown coal production is negligible.

<sup>&#</sup>x27; Hard coal only.

Brown coal only.

<sup>•</sup> Data in this table are not intended to be totals of the data in Tables 21 through 26 of individual petroleum products, because this table includes minor miscellaneous products which are not included in any of the following tables. Synthetic products or substitute fuels are included in Bloc data but are excluded in NATO data. For further detail on synthetics in the NATO countries, see the following footnote.

<sup>&</sup>lt;sup>b</sup> Excluding Greece, Iceland, and Luxembourg. Data refer to total production less consumption at the refineries. Synthetic products or substitute fuels are excluded, amounting in 1953 to 1.33 million tons in the European NATO countries, or a relatively small percent of their total production.

<sup>·</sup> Annual production based on the January-June rate; excluding Norway.

<sup>&</sup>lt;sup>d</sup> No production in North Vietnam. Synthetic production is included in the data for the USSR, Communist China, Czechoslovakia, East Germany, and Poland.

<sup>•</sup> Total nongaseous petroleum products.

f Including refined bitumen.

Including asphalt.

<sup>\*</sup> Excluding Denmark, Greece, Iceland, Luxembourg, Norway, and Turkey. The 1938 total includes all Germany. Data refer to residual fuel oils only, excluding road oil and special products. Data for the Netherlands in all years and for Germany in 1938 include distillate fuel oils.

<sup>&</sup>lt;sup>b</sup> No production in North Vietnam. Synthetic production of residuals and others is included in the data for the USSR, Communist China, and East Germany.

e Excluding residuals manufactured from imported crude oil.

d Including diesel oil; excluding quantities used at refineries and lost.

<sup>\*</sup> Excluding quantities used at refineries and lost.

<sup>&</sup>lt;sup>1</sup> Excluding USSR, Eastern Europe, India, and Communist China.

- <sup>b</sup> Excluding manganiferous ores containing 5 percent or more of manganese.
- ° No production in Albania.
- <sup>d</sup> 1939.
- 1937.
- f Shipments.
- Including ferro-titanium.
- h Including iron sand.

<sup>\*</sup> Excluding Denmark, Greece, Iceland, and the Netherlands. Data refer to the gross amount of marketable iron ores in the state in which they leave the mines, including manganiferous ores but excluding pyrites. Metal content of ore in the NATO countries and other Free World countries are as follows: Belgium, 35 percent; Canada, 55 percent; France, 35 percent; Italy, 50 percent; Luxembourg, 30 percent; Norway, 65 percent; Portugal, 50 percent; Turkey, 65 percent; UK, 30 percent; West Germany, 30 percent; the US, 50 percent; Algeria, 55 percent; Austria, 30 percent; India, 65 percent; Japan, 55 percent; Spain, 50 percent; Sweden, 60 percent; Venezuela, 65 percent; and Yugoslavia, 45 percent.

<sup>\*</sup> Including France, Greece, Italy, the US, and West Germany. The 1938 total includes all Germany.

<sup>&</sup>lt;sup>b</sup> Dried equivalent of crude ore.

<sup>&</sup>lt;sup>o</sup> Shipments.

<sup>&</sup>lt;sup>d</sup> No production in Albania, Bulgaria, Czechoslovakia, East Germany, or Poland.

e Production in USSR and Communist China should be called "aluminous raw materials" rather than bauxite because some nonbauxite ores have been included. For example, production in China in 1938 was from shale, not bauxite. Nonbauxite sources of alumina are being developed in the Sino-Soviet Bloc and probably will become important.

f Exports.

- \* Including barley, oats, and corn unless otherwise noted.
- <sup>b</sup> Excluding Iceland (all years) and Portugal (1956). The 1938 total includes all Germany.
- <sup>c</sup> Preliminary.
- d Including all grains other than wheat and rye.
- Not comparable with other data, because corn is included ensiled in the milky, waxy stages and converted to dry corn equivalents.
  - <sup>1</sup> Corn only. The 1938 figure is a 1937-41 average.
  - Corn is either not produced or produced only in insignificant quantities.
  - h 1935-39 average.
  - i Oats only.
  - <sup>i</sup> Barley and corn only.
  - Estimated total. Sino-Soviet Bloc countries are included for oats and barley, but not for corn.

h Some countries listed also produce a large amount of noncentrifugal sugar. Noncentrifugal sugar includes all types of sugar produced by other than the centrifugal process. The estimates include such kinds known as piloncillo, panelo, papelon, chancaca, rapadura, jaggery, gur, muscovado, panocha, and the like, used largely for consumption in the relatively few areas where produced:

<sup>•</sup> Including mixed yarns and yarn obtained from cotton waste. Data for France and Germany include some rayon, staple fibre yarn, and the like which are produced by the cotton industry.

<sup>&</sup>lt;sup>b</sup> Excluding Iceland and Luxembourg; Greece (1955-56); Denmark and Turkey (1956).

 $<sup>^{\</sup>circ}$  Estimated from raw cotton used.

<sup>&</sup>lt;sup>d</sup> No production in Albania.

e Prewar average.

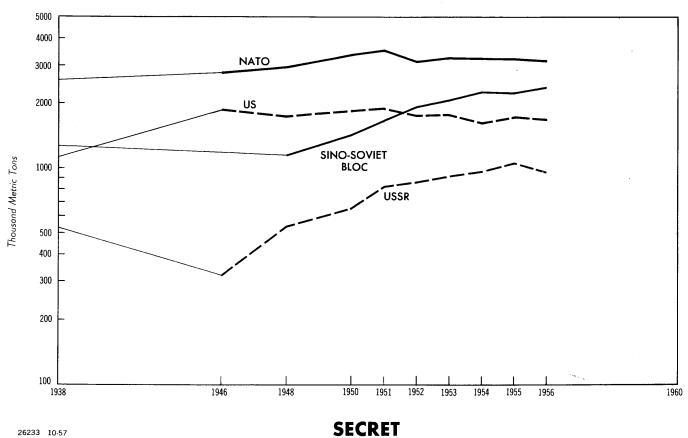

ſ 1939.

<sup>\*</sup> There is not strict comparability between the corn pickers produced in the US and the corn harvesting combines produced in the Sino-Soviet Bloc. The latter picks up the corn stalks and chops them up in addition to picking the ears from the stalks; the US corn picker leaves the corn stalks in the field.

<sup>•</sup> No production in countries of the Sino-Soviet Bloc which are not listed.

b Including Canada (except 1946 and 1953), Denmark (except 1938 and 1953), France, Italy, the UK (1935 instead of 1938), the US, and West Germany (except 1938, 1948, and 1953). Because of lack of data for Canada and West Germany, totals are not presented for years after 1952. Data refer to the output of railways and private shops for domestic use and export. Locomotives include all railway types regardless of gauge or form of power but exclude selfpropelled cars and mining and industrial locomotives.

f 8 months only.

<sup>&</sup>lt;sup>b</sup> No production in countries of the Sino-Soviet Bloc which are not listed.

<sup>&</sup>lt;sup>c</sup> Possibly narrow gauge or industrial and mining.

Because physical units include cars of 2, 4, or more axles, the term does not represent an exact measure of carrying capacity. It is used here, however, because this is the form in which NATO, USSR, and European Satellite data currently are being published. Although the European NATO countries are still producing some smaller cars, all US, USSR, and much of Satellite production now consists of 4-axle units.

b Including Canada (except 1956), France, Italy, Norway (except 1952-56), the UK, the US, and West Germany. Data refer to all types of goods-carrying cars, except baggage and mail cars, unless otherwise noted.

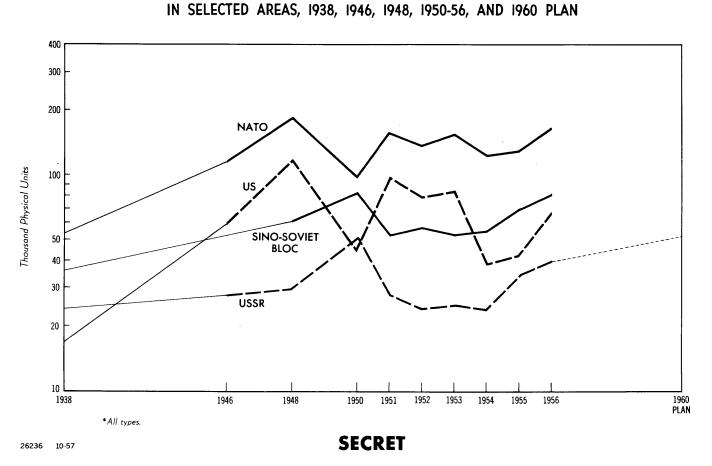

<sup>•</sup> No production in North Korea, North Vietnam, or Albania.

<sup>&</sup>lt;sup>d</sup> Data for all years include coaches, baggage cars, and freight cars.

<sup>•</sup> Including passenger cars after 1950.

<sup>•</sup> Excluding Iceland and Greece (1956). Data refer to net metric ton-kilometers, including all goods and live-stock carried by trains other than plantation, industrial mining, funicular, and cable railways, but excluding service traffic, mail, baggage, and nonrevenue government stores. The 1938 total includes 1936 data for West Germany.

<sup>&</sup>lt;sup>b</sup> Data refer to tariff ton-kilometers, which represent tons originated multiplied by length of haul by the shortest route.

<sup>&</sup>lt;sup>e</sup> Data for mainland China only, excluding Manchuria (for which data were not available).

d 1949.

<sup>• 1937.</sup> 

<sup>&</sup>lt;sup>1</sup> 1936.

Full carloads only.

h State railways only.

i Including service traffic.

<sup>&</sup>lt;sup>j</sup> Excluding livestock.

k Class 1 railways.

<sup>\*</sup> Excluding Iceland. The 1938 total includes 1936 data for West Germany and 1937 data for Turkey. Data refer to gross weight of metric tons carried. Goods and livestock carried by more than one railway in same country are counted only once unless otherwise noted. Excluding service traffic, mail, baggage, and nonrevenue government stores.

b Data for mainland China only, excluding Manchuria (for which data were not available).

<sup>° 1949.</sup> 

d 1937.

e 1936.

<sup>&</sup>lt;sup>f</sup> Standard gauge railways only.

Including duplication of freight handled on more than one railway.

h State railways only.

i Excluding livestock.

i Including service traffic.

k Full carloads only.

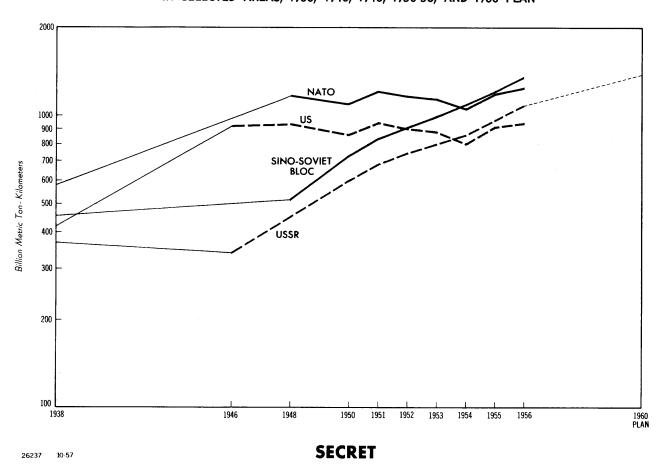

<sup>&</sup>lt;sup>1</sup> The series "tons carried" as quoted in the source has been revised to exclude duplication of freight handled on more than one railway and now includes all government railways.

<sup>\*</sup> Deadweight tonnage (DWT).

<sup>&</sup>lt;sup>b</sup> Including both SDGP (Soviet Danube fleet) and DDSG (a portion of the Austrian Danube fleet taken over by the USSR).

<sup>·</sup> About 10 percent of the dry cargo barges and the passenger vessels may be assigned to the Tisza River.

d Excluding harbor tugs.

<sup>•</sup> Including vessels which may be on loan from or rented from the USSR.

It is probable that a large part of Rumania's fleet, perhaps as much as 35 percent, was out of use or under repair because of age in the postwar years up to 1955. From 1955 onward, indications are that new construction and repair are bringing the number of vessels actually in operation closer to the estimated totals shown.

Estimated from Yugoslav records of total fleet on all rivers.

h Known as the DDSG.

i Including 16 rented vessels: 4 tugs, 2,530 HP; 12 barges, 11,778 tons.

i Including only 1953 data plus vessels due to be returned in 1955-56 by USSR. No information is available on new construction.

• Because of the difficulty of determining valid exchange rates, data are not presented in terms of a common currency. In lieu of rates which would be appropriate to apply to the construction industry, the following official exchange rates are listed here merely to give a general idea of the value of the foreign currencies. These rates should be used with caution, as they were arbitrarily established and maintained.

| Country        | Currency           | Value<br>in US\$ |
|----------------|--------------------|------------------|
| USSR           | 1955 ruble         | 0.25             |

<sup>•</sup> Data for the Sino-Soviet Bloc refer to telephone subscribers, including both private and civil governmental (other than military) users. Data for NATO refer to telephones in use, including both public and private telephones which can be connected to a central exchange. The number of subscribers is less than the number of telephones in the same country, but no reliable ratio between the two can be supplied.

1954

1955

<sup>&</sup>lt;sup>b</sup> 1937 except US, for which 1938 data are used.
